Education

Bachelor of Science in Mechanical Engineering Expected December 2026
The University of Texas Permian Basin *Odessa, TX*
Relevant Coursework: Mechanical Design, Heat Transfer, Fluid Mechanics II; Engineering Materials & Optimization (in progress)
Activities: FAST, ASME, AIAA, SPE

Engineering Experience

Baker Hughes | Engineering & Technology Intern | Midland, TX | May 2026 – Present
ESP Performance Analysis
- Developed a preliminary methodology for evaluating returned electric submersible pump (ESP) performance across seven newer-versus-legacy product-family comparisons using shop PIT measurements of head, horsepower, efficiency, and vibration.
- Applied runtime-matched and geographic controls, evaluated field production information as operating context, validated comparison outputs, and presented findings, assumptions, and analytical limitations to product-line engineers.

ESP Design Intelligence
- Developed and verified a local Python application that organizes historical ESP installations, equipment, and available operating evidence for application-engineering design reviews; defined requirements, comparison logic, and software tests and continue refining the workflow through engineer feedback.

Equipment Inspection & Failure Investigation
- Supported dismantle, inspection, and failure analysis (DIFA) of electric submersible pumps through hands-on component disassembly, cleaning, and inspection; reviewed evidence of wear and discussed potential failure mechanisms with engineers, customers, and consultants.

Engineering Projects

Falcon Aeronautics & Space Team (FAST) – 10,000-ft Competition Rocket
Aerodynamic Design Lead | Aug 2024 – Jun 2026; Mentor | Jun 2026 – Present
- Led aerodynamic design of modular aluminum fin-can assemblies used at IREC and the Texas Shootout; developed geometry, SOLIDWORKS models, and manufacturing drawings and evaluated static stability and fin flutter using OpenRocket and MATLAB.
- Coordinated airframe integration with propulsion and recovery teams for telemetry-verified flights reaching 8,869 ft at IREC and 9,442 ft at the Texas Shootout; now mentor team members on rocket design and subsystem integration.

3D Printing Filament Extruder – Senior Design
Preliminary Design | Aug 2026 – Present
- Performed torque, power, gearing, extrusion-force, heater-sizing, heat-transfer, and shaft-loading calculations to guide motor selection; developed SOLIDWORKS designs for the motor assembly, hopper, auger, barrel, baseplates, and control-board brackets while documenting prototype manufacturing plans.

Thermo-Fluids / Mechanical Systems Lab – UTPB
Course Laboratory Projects | Fall 2025 – Spring 2026
- Tested centrifugal and gear pumps and a reciprocating compressor using dynamometer instrumentation and data acquisition; analyzed SR-30 turbojet performance using compressible-flow relations and a control-volume thrust model.

Technical Skills

Programming & Data: Python (pandas, NumPy, Matplotlib, SciPy, pytest); MATLAB; Git/GitHub
Software: SOLIDWORKS, OpenRocket, Excel
Test & Lab: Pump and compressor testing, dynamometer instrumentation, pressure/flow measurement, data acquisition
Fabrication: Basic machining, hand tools, 3D printing, epoxy layups, rocket assembly and avionics integration
Certifications: Basin United; NAR High-Power Rocketry Level 1

Additional Experience

Logistics Associate | Academy Sports + Outdoors, Midland, TX | Jul 2024 – May 2026
Earlier Employment | H-E-B, Midland, TX | Oct 2022 – Jan 2024; Whataburger, Midland, TX | Oct 2020 – Mar 2022
